

Product Review Exercise

You have been tasked with developing a promotional site for the best selling book, "**Squirrel Parties for Dummies**" by Craig Castelaz.

A DAO interface has been provided and you will need to implement the interface to communicate with a database. The same DAO is used for viewing all reviews that have been submitted

The home page of the site should provides a list of product reviews submitted from the web. The application should:

1. Providing a page that allows a site user to submit a new review
2. Display previously submitted reviews on the home page

Submitting a New Review

Users can navigate to a page on the web application that provides them with a form to submit a new review.

The page will provide the user with the form to submit:

- Username (required)
- Rating (required) [1-5 stars]
- Review Title (required)
- Review Text (required)

ASP.NET MVC - Controllers Day 2 (HTTP POST)

New Book Review

Enter your username	<input type="text"/>
How many stars?	<input type="text" value="0"/>
Provide a title	<input type="text"/>
Review	<input type="text"/>

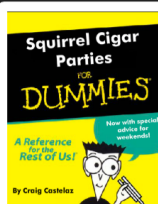

The data should be submitted via HTTP POST. Once the submission is received, it should be saved in the database. The user should be redirected (POST-Redirect-GET) to the Home Page.

Viewing Reviews

The Home Page allows users the ability to see any reviews that were previously submitted to the web application.

The page should display to the user all of the prior reviews. You can use any format you like, this is just an example:

ASP.NET MVC - Controllers Day 2 (HTTP POST)

Past Reviews

My party was a huge success with this book ★★★★★
by dwintrich on 38/23/2016

This party could not have taken place without having the cigar parties for dummies book

No party complete without it ★★★★★
by jtucholski on 2/23/2016

There's no way to hold a succesful party without first looking at this book!

Slow read ★★
by ccastelaz on 2/23/2016

I fell asleep a few times because it was a slow read
